Wong Kin How

Senior Frontend Developer · Next.js · TypeScript · Agentic Coding

kinhowwong@gmail.com · +60 16-270 6926 · Kuala Lumpur, Malaysia · Case study: kinhow.github.io/ai-workflow

Senior frontend developer with 10 years in frontend and 8 with React, on a high-traffic classifieds marketplace. I led the move of a legacy Next.js 9 app to Next.js 16 App Router. I build the context, hooks, and checks that make AI coding agents safe for a product team.

WORK EXPERIENCE

Mudah.my

Software Engineer 2 (Frontend) — 2023 — Present

- Owned the auto-web app and led its 3 – 4 engineers: set the coding standards and lint gates, reviewed teammate PRs, and built the Auto landing page and the new ad-view page.
- Moved the Auto listing page from a legacy Next.js 9 + Redux repo to Next.js 16 App Router. Replaced Redux with Zustand for client state and TanStack Query for server state.
- Set up context and guardrails for AI coding agents: CLAUDE.md files, path-scoped rules, and ADRs load only the context that each task needs. Claude Code hooks block dangerous commands and stop a PR until the tests pass.
- Designed and led a Claude Code plugin marketplace used in 5 product repos. Hooks load each product's business rules into the agent's context, and an eval suite gates each release.
- Built a spec-driven agentic workflow: grill the PRD against business rules, then spec, tickets, test-first code, AI code review, PR, and staging merge. A person merges to main.
- Adopted React Server Components, streaming Server-Side Rendering (SSR), and React 19 + React Compiler. Built Search Engine Optimization (SEO) for the listing page and ran A/B tests with the SEO and analytics teams.

Software Engineer (Frontend) — 2020 — 2022

- Shipped the Trustap escrow payment integration from end to end, the first secure payment flow on Mudah.
- Built a mobile filter system and cross-client email templates, and maintained the UI component library.

Asia Fusion Technology Ltd

Software Engineer (Frontend) — 2018 — 2020

- Built React single-page apps with shared components, from product and design specs.

fourtitude.asia

Frontend Developer (client: 11street) — 2016 — 2018

- Built campaign pages for the 11street marketplace.

SKILLS

Languages & Frameworks: HTML, CSS, JavaScript, TypeScript, React 19, Next.js 16 (App Router), REST APIs
State, Styling & Testing: Zustand, TanStack Query, Tailwind CSS, Mantine UI, Material UI, Jest, React Testing Library
Performance & SEO: Core Web Vitals, web performance, SSR, React Server Components, SEO, structured data
Tooling & Design: CI/CD, ESLint, Prettier, Storybook, component libraries, Sentry, Google Tag Manager, Figma
AI tooling: Claude Code (hooks, subagents, plugins), MCP, context engineering, evals, spec-driven development

LANGUAGES AND EDUCATION

Languages: English, Chinese (Mandarin), Cantonese, Bahasa Melayu
Education: PJ College of Art & Design, Interactive Multimedia & Animation Design
