Wong Kin How

Senior Frontend Developer · Next.js · TypeScript · Agentic Coding

kinhowwong@gmail.com · +60 16-270 6926 · Kuala Lumpur, Malaysia · Case study: kinhow.github.io/ai-workflow

Senior frontend developer with 10 years in frontend and 8 years with React. I build the systems that make AI coding agents safe for a product team. I do context engineering with CLAUDE.md files, path-scoped rules, ADRs, and a glossary, so each agent gets only the context that its task needs. I wrote Claude Code hooks, subagents, and plugins, and an eval suite gates each plugin release. My spec-driven workflow takes each PRD through business-rule checks, test-first code, and AI review to a human merge. I also led the move of a legacy Next.js 9 app to Next.js 16 App Router.

WORK EXPERIENCE

Mudah.my

Software Engineer 2 (Frontend) — 2023 — Present

Tech: Next.js 16 · React 19 + Compiler · TypeScript · TanStack Query · Zustand · Mantine · Tailwind CSS · Jest + RTL · Sentry · Claude Code

- Owned the auto-web app. Led its 3 – 4 engineers, set the coding standards and lint gates, and reviewed teammate PRs.
- Moved the Auto listing page from a legacy Next.js 9 + Redux repo to Next.js 16 App Router. Replaced Redux with Zustand for client state and TanStack Query for server state.
- Wrote the CLAUDE.md files, path-scoped rules, ADRs, and a glossary, so coding agents load only the context that each task needs. Split a 29 KB coding standard into a hub and 8 topic files.
- Added Claude Code hooks that block dangerous commands, protect key files, lint each edit, typecheck before the agent stops, and block a PR until the tests pass. Added 2 subagents: an engineer and a reviewer.
- Built a spec-driven agentic workflow: grill the PRD against business rules, then spec, tickets, test-first code, AI code review, PR, and staging merge. A person merges to main.
- Designed and led a Claude Code plugin marketplace for 5 product repos. Hooks load each product's business rules into the agent's context, and open a GitHub issue when a rule is missing.
- Gated plugin releases with CI checks and an eval suite that compares the output with and without each skill.
- Adopted Server Components, streaming SSR, and React 19 + React Compiler. Built listing-page SEO (structured data, canonical tags) and A/B tests with the SEO and analytics teams.
- Built the Auto landing page and rebuilt the ad-view page, and defined the folder structure and frontend docs.

Software Engineer (Frontend) — 2020 — 2022

Tech: Next.js · TypeScript · Tailwind CSS · Material UI · Jest · Storybook · Rollup

- Shipped the Trustap escrow payment integration from end to end, the first secure payment flow on Mudah.
- Built a dynamic mobile filter system and cross-client email templates, and maintained the shared UI component library.

Asia Fusion Technology Ltd

Software Engineer (Frontend) — 2018 — 2020

- Built React single-page apps, with shared components and libraries, from product and design specs.

fourtitude.asia

Frontend Developer (client: 11street) — 2016 — 2018

- Built campaign pages for 11street with HTML, SCSS, and jQuery, and wrote reusable SCSS that cut repeated work.

SKILLS

Languages & Frameworks: HTML, CSS, JavaScript, TypeScript, React, Next.js (App Router)
State, Styling & Testing: Zustand, TanStack Query, Tailwind CSS, Mantine UI, Jest, React Testing Library
Tooling & Design: ESLint, Prettier, Turbopack, Storybook, Sentry, Google Tag Manager, Figma
AI tooling: Claude Code, context engineering, hooks, subagents, plugins, MCP (Jira, Context7), evals, spec-driven development

LANGUAGES AND EDUCATION

Languages: English, Chinese (Mandarin), Cantonese, Bahasa Melayu
Education: PJ College of Art & Design, Interactive Multimedia & Animation Design
